

REAL STONE

SKINROCK® is a thin layer of genuine natural stone, not a manufactured or engineered surface. Its texture, veining, and movement are formed entirely by geology over time, just as with full slabs. Each panel carries natural variation, bringing depth and character that cannot be replicated.

ULTRA-THIN

SKINROCK® offers the look and integrity of natural stone in a format that is lighter and more adaptable than traditional slabs. Its reduced weight allows for more straightforward handling and installation. The material retains the strength of stone while introducing a degree of flexibility that allows it to follow curves and wrap architectural forms. Select translucent varieties can also be backlit, revealing the natural structure of the stone in a way that adds depth without relying on artificial patterning.

 SKINROCK®

The beauty of
natural stone
ultra-thin veneers

 surface forms

FLEXIBLE

Through a specialized production process, each SKINROCK® veneer is only a few millimeters thick while maintaining the integrity of natural stone. The result is a surface that can bend to follow curved walls, wrap columns, and move cleanly around rounded forms.

LIGHTWEIGHT & SUSTAINABLE

SKINROCK® weighs less than 20 lbs per 4x8 sheet, making it manageable for a single installer to handle and position. Its lightweight format can also reduce transportation demands and support more efficient building practices. Each ultra-thin veneer can be precisely cut to fit tight corners and adapts to uneven or curved surfaces with ease.

NATURALLY BEAUTIFUL

Through a specialized process, a thin layer of natural stone is bonded to a flexible backing with a high-performance adhesive. This approach preserves the texture and visual integrity of solid stone while allowing for easier installation across a wider range of applications with bamboo-like flexibility.

SKINROCK® is available in a range of genuine stone types, including slate, quartzite, and marble, offering varied color palettes and natural surface textures drawn directly from the quarry.

UNLIMITED APPLICATIONS

- Backsplashes (kitchen and bathroom)
- Shower surrounds
- Gas fireplace surrounds
- Feature walls
- Outdoor kitchens and BBQ areas
- Accent walls and custom wall panels
- Flooring accents and custom flooring
- Custom edge treatments and trims
- Wet areas (like spas or poolsides)
- Bars and other commercial surfaces
